Market Size FY2019

\$50B

Target Market FY2030

19.57%

CAGR (policy target)

33%

Domestic mfg share 2025

Market Overview

- India's medical devices market grew from \$7B (FY2019) to \$18B (FY2024), driven by rising healthcare demand, chronic diseases, and supportive government policies.
- The sector aims to reach \$50B by FY2030, supported by rapid domestic manufacturing growth, cost advantages, and expanding export potential.

PLI Scheme — Manufacturing Shift in Progress

- The ₹3,420 Cr PLI scheme has accelerated domestic medical device manufacturing, with investments reaching ₹33,534 Cr — 94% above targets.
- Domestic manufacturing share rose from 10% (2019) to 30% (2024), enabling India to locally produce advanced devices including MRI, CT, and radiotherapy equipment.

High-Growth Segment Opportunities

- Wearables / Digital Health leads growth at 25%+ CAGR, followed by Cancer Care (16%), Cardiac Devices (14%), IVD Diagnostics (12%), and Diagnostic Imaging (8%), highlighting strong demand across preventive, diagnostic, and treatment-focused segments.

Strategic Recommendations

1. Invest in wearables and digital health manufacturing

India's wearable and connected-health ecosystem shows the highest projected CAGR (25%+) supported by strong software and electronics capabilities.

2. Expand domestic manufacturing under the PLI ecosystem

Reduced import dependence in imaging, diagnostics, and cancer-care equipment creates major localization opportunities for Indian manufacturers and SMEs.

3. Accelerate export diversification strategy

Medical device exports have grown rapidly, but achieving FY2030 targets will require deeper expansion into Africa, Southeast Asia, and emerging healthcare markets beyond current US/EU dependence.
